

Production and Scheduling

Production & Scheduling provides critical value to every department of your business. It stands out amongst other similar software because it links directly to actual and budgeted costs and sales information for cash flow analysis.

You are able to create real-time schedules for construction, sales and administrative teams. This allows them to easily access and manage schedules on any handheld device via a standard web browser, no matter where they are.

HomeFront Software brings it all together

Features

Scheduling and Communication

Manage multiple trades per job

View and manage your schedules using an activity, Gantt, resource or calendar view

View resource allocations to ensure a balanced work load for trades

Keep your trades in the loop with automatic email notifications or via a secure web portal

View and update schedules for several jobs in the same Gantt view

Create schedules using templates to determine the critical path of a project by specifying either the start or end date

Quality Assurance

Link schedules to purchase orders and financial information for cash flow accuracy

Enforce completion and standard checklists

Approval of activities to be paid as well as designated automatic invoice approvals

Online Interface

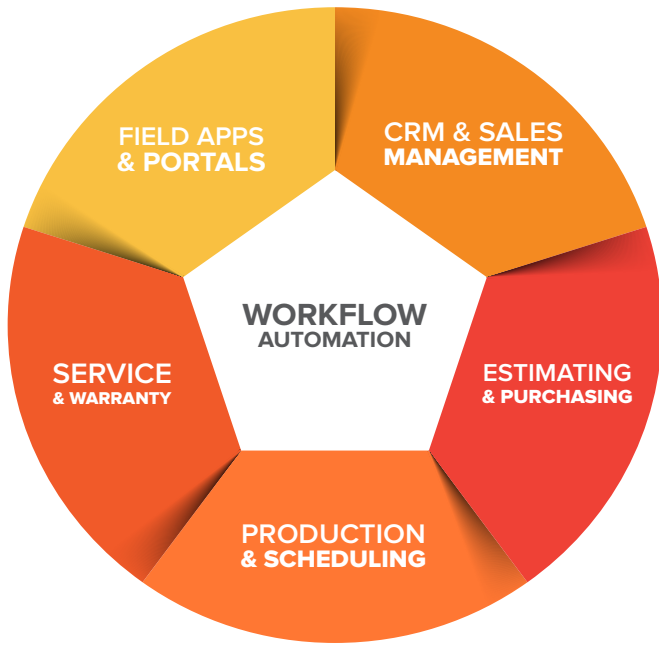

Access
and manage schedules on the web or any handheld device

Initiate field and variance purchase orders while **working on the field**

Enhance your production and scheduling with HomeFront

HomeFront Production & Scheduling has been developed as an integral part of HomeFront Software, which offers home builders a truly integrated, comprehensive software solution.
